

Galina Alperovich

Senior Machine Learning Researcher

Galina Alperovich is a senior machine learning researcher at Avast. She joined Avast in 2017 and since then has been working on new methods of anomaly detection with AI, and AI applications for network security in Avast's next-generation IoT security platform, Avast Smart Home. In her role, Galina also collaborates with top universities as an industry expert and recently worked on a study exploring the security of IoT devices around the world, published by Avast in collaboration with Stanford University.

Galina holds a Masters Degree in Mathematics from the Saint Petersburg State University and a Masters Degree in Artificial Intelligence from the Czech Technical University. Before joining Avast, she worked as a data scientist and software developer at JetBrains, leading software vendor specializing in the creation of intelligent development tools.
